*Give me six hours to chop down a tree and I will spend the first four sharpening the axe – Abraham Lincoln*

This quote has always been inspiring in my life. I believe that learning about anything is not only confined to childhood or the classroom but takes place throughout life while moving through various situations. As such, education not only enhances the social inclusion but also develops personal attributes, competitiveness and employability. I began my relationship in the year 2001 when I enrolled myself for my graduation in eCommerce and later moved on to completing my a double masters with an MBA in Information Technology and an MS in Digital Science and Embedded Systems.

As a part of my Bachelors, I had been exposed to subjects such as **e-Commerce & Business Strategy, Marketing Communication, Statistical Techniques and Decision Analysis, was introduced to 'C' and Programming in C++, Web Technology and Design, Visual Basic Programming 6.0 and many more.** These subjects that I studied have provided me with the stimulating academic background. Additionally, I have also been involved in analysis of gathered requirements related to the assigned project/problem statements, designing the module on the grounds of analysis, development of code and testing the developed code.

Thereafter in consonance with my interest, in the year 2005, I commenced by career and now hold over 11 years of exposure in the field of IT, recognized for providing innovative and results - driven Project Manager with demonstrated success in increasing revenues. I have walked the line between project management and information technology by overseeing multiple projects across all phases of development. By implementing best practices, I have gained from being a part of an interdisciplinary team to achieve project milestones, he holds complete ownership towards the overall project status, reports, cost estimates and resource plans; he has been consistently accredited for providing complete project management support and continuous improvement services. I enhanced my mentoring skills and frequently assisted co-workers who had little or no background in computers. I also volunteered in conducting trainings for juniors and colleagues in Project Management | Business Analysis | Design and Development | Application Development | Infrastructure Maintenance | Risk Analysis | Root Cause Analysis | Incident Management | Disaster Recovery | Business Objects Technology | Agile and Waterfall | Change Management | Client Interface

I am a firm believer in continuous knowledge upgrade and have always remained abreast with the latest in the market to remain updated. In addition my regular role accountabilities, I have interacted with clients, gathered their business requirements, wrote functional and technical specifications of the custom enhancements and actively involved in system development. I was also involved in coding and development, and provide specialist guidance information to the support, systems testing, and quality assurance functions for improving the procedures. I successfully completed challenging assignments and provided immense business value by providing well designed solutions.

By necessity as my professional responsibilities have changed or for personal interest, I have turned my attention towards further growth in the management segment. My inherent abilities of leading teams with perfection in project management, business analysis, business continuity planning, data center operations and testing, would enhance the working of any organization wherever I join.

I am an innovative thinker, able to apply analysis and creativity to problem solving. I am a highly personable, self-motivated and diligent individual with flexibility to adapt to new situations. Being a focused, motivated and goal-oriented professional, I have consistently proven my ability to handle operational and strategic levels of multiple responsibilities in crisis and pressure, while operating under rigorous deadlines.

With an innate sense of task prioritization and result oriented attitude towards accelerating organizational growth and that too in a high pressured, time bound and competitive environment, I reckon that my grooming level is apt to

look outward for a challenging position, requiring complete grasp & grip of high level of professional loyalty, integrity and maturity.

I am seeking to apply into the <Course Name> in <University Name> mainly because of the virtue of its name and reputation. I am one of those who dreamt of having higher studies in <Country>. <Country> is a land of quality universities and a treasure of opportunities, those are looking for.

I feel very proud to have taken this step for today after building 11+ years of corporate experience. I am hoping to learn a lot more than what I am expecting out of this experience. I wish to enhance to and learn about leadership, about commitment, about looking deeper inside people and judging them not by their appearance or background but by what they bring to the table and a lot more.

I have found myself in situations, which force me to challenge ideologies previously accepted blindly simply because they had been handed down by the society and culture I had been brought up in. Most of all the interaction with people from differ backgrounds, different countries has been an eye opener. The best part of this role was that my work was not limited by any sort of boundaries. So, I eagerly took up opportunities to volunteer with other departments of the organization such as the recruitment and marketing department and through this experience found the lure to study the field of management professionally.

A glance through my credentials, would have given you an idea about my working capabilities. I am confident of fitting in the slot as well as in the team. However, should you desire personal interaction. I may be called upon where the possibility of our association could be explored further.

Thank you
